Variance 35.751; scale 0.413 Mean 14.768; Statistics: Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

#### ALIGNMENTS

B O D D D D D D D D D D D D D D D D D D	R89602 standard; peptide; 17 AA.  R89602 standsolver antigen, semenogelin derived, cleavage substrate.  Prostate specific antigen, prostate specific antigen; proteolysis; gell structure; dissolution; prostate specific antigen; proteolysis; chymotrypsin like specificity; peptide substrate; cleavage site; assay; determination; proteolytic activity; identification; inhibitor: cytotoxic agent; conjugated; treatment; prostate cancer.  WOSGO0503-A1.  11-JAN-1995; US-267092.  WERL) MERCK & CO INC.  DeFeo-Jones D, Feng D, Garsky VM, Jones RE, Oliff AI:  WFI: 96-077275/08.  New peptide substrates cleaved by prostate cancer, and assay for determination of PSA activity English.  Disclosure: page 60: 142pp; English.  Human semenogelin I (ASD) is one of the major proteins, including hSII and fibronectin, in the sperm entrapping gel formed at election of prostate specific antigen (PSA), a protease with
3555555558	chymotrypsin like specificity, which proteolyses the above major proteins. New substrates, including the present peptide, cleaved by PSA, i.e. peptides contg. a NSI PSA cleavage site, can be used in assays to determine the proteolytic activity of free PSA in a sample, and to identify cpds. which inhibit the proteolytic activity of pSA, they may also be conjugated, via a covalent bond or peptide linker, to a cytotoxic agent and used to treat prostate cancer.  Sequence 17 AA;

The present sequence is a novel oligopeptide that is recognised and controlled by the prostate specific antigen (PSA). It was designed based on the sequences surrounding the PSA cleavage sites of Semenogelin I, a major sperm entrapping gel protein. PSA, which has confynctypsin-like specificity is responsible for dissolution of the gel structure formed at ejaculation by proteolysis of the major gel proteins (Semenogelin I and II, and fibronectin). Liquefaction of the ejaculate colleases progressively motile spermatozoa. PSA complexed to alpha 1-antichymotrypsin is the predominant form of serum PSA. Serum measurements of PSA are useful for monitoring treatment of adenocarcinom of the prostate. Prostate metastases are also known to secrete immunologically reactive PSA since serum PSA is detectable at high levels in prostatectomised patients showing widespread metastatic prostate concer. Cytotoxic compounds that could be activated by the proteolytic cancer. Cytotoxic compounds that could be activated by the prostate compounds and this oligopeptide are useful in treatment of prostate cancer. The colloppeptide can also be useful in a quantitative assay for enzymatically advantages.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

This is the full length variable surface antigen VSA1 protein of Ehrlichia canis. Its amino acid sequence was deduced from open reading frame (ORF) 10 f a genomic locus (see VOT180) of E. canis that was obtained on the basis of homology to the major antigenic protein MAP1 (see W51088) of Cowdria ruminantium. This genomic cours included 2 ORFs encoding similar, but non-identical proteins (see W51096-97). A claimed composition comprises a nucleic acid see VOT176-82) encoding a polypeptide (see W51089-99) that elicits a protective immune response against a rickettsial pathogen. The nucleic acid is used, in human or veterinary medicine, in vaccines to protect against Rickettsial, Ehrlichia. Anaplasma and Cowdria species. The Ehrlichia antigenic polypeptides can be used diagnostically to detect antibodies associated with Ehrlichia infection (claimed). Sequence 287 AA;

The determination of PSA activity.

Claim 6: Page 64; 142pp; English.

Human semenogelin I (hSI) is one of the major proteins, including the major proteins, including the sperm entrapping gel formed at ejaculation. This gel structure undergoes dissolution via the ejaculation. This specific antigen (PSA), a protease with action of prostate specificity, which proteolyses the above major proteins. New substrates, including the prosent peptide, cleaved by PSA, i.e. peptides contg. a hSI PSA cleavage site, can be used in assays to determine the proteolytic activity of free PSA in a sample, and to identify cgds. Which inhibit the proteolytic activity of PSA, they may also be conjugated, via a covalent bond
                                                                                                                                                                                                                                                                                           useful for, e.g. stimulating protective immune response in humans or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      oligopeptide-drug conjugates for active antigen, and in oligopeptide-drug conjugates for prostatic cancer treatment oligopeptide-drug conjugates for prostatic cancer treatment clients is a novel oligopeptide that is recognised and protein Psecent sequence is a novel oligopeptide that is recognised and protein Psecent sequence is a novel oligopeptide that is recognised and protein Psecent sequences surrounding the PsA cleavage sites of centrally cleaved by free prostate specificity is responsible for dissolution of the gel structure formed at ejaculation by proteolysis of the major gel proteins comported in and II, and fibronectin). Liquefaction of the ejaculate releases progressively motile spermatozoa. PSA complexed to alpha 1-antichymotrypsin is the predominant form of serum PSA. Serum measurements of PSA are useful for monitoring treatment of adenocarcinoma of the prostate. Prostate metastases are also known to secrete immunologically reactive PSA since serum PSA is detectable at high levels in prostatectomised patients showing widespread metastatic prostate cancer. Cytotoxic compounds that could be activated by the proteolytic carivity of PSA should also be prostate cell specific as well as specific or activity of PSA should also be prostate cell specific as well as specific or and this oligopeptide are useful in treatment of prostate cancer. The colligopetide can also be used in a quantitative assay for enzymatically
                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                      Gaps

Oligopeptide 29 cleaved by free prostate specific antigen.
Oligopeptide, proteolytic cleavage; prostate specific antigen; PSA;
cleavage site; Semenogelin I; chymotrypsin-like; serum PSA;
adenocarcinoma; prostate metastases; prostate cancer; treatment;
detection; cytotoxic conjugate; activation; quantitative assay.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         27-MAR-1998 (first entry)
Oligopeptide 126 based on Semenogelin I cleavage site.
Oligopeptide; proteolytic cleavage; prostate specific antigen; PSA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Oligopeptide(s) recognised and cleaved by free prostate specific antigen - useful in assays for active antigen, and in

antigen - useful in assays for active antigen, and in clayer. It is a serial in assays for active antigen, and in clayer. In a state of the prostatic cancer treatment ps claim 3; page 160; 192p; English.

The present sequence is a novel oligopeptide designed based on the sequences surrounding the prostate special cantigen (PSA) cleavage sites of Semenogelin I, a major sperm entrapping gel protein. PSA, which has conformed at ejaculation by proteolysis of the major gel proteins of the major gel protein of the gel structure formed at ejaculation by proteolysis of the major gel proteins of scructure formed at ejaculation by proteolysis of the major gel proteins of semenogelin I and II, and fibronectin). Liquefaction of the ejaculate of alpha 1-antichymotrypsin is the predominant form of serum PSA. Serum measurements of PSA are useful for monitoring treatment of adenocarcinoma of the prostate. Prostate metastases are also known to secrete immunologically reactive PSA since serum PSA is detectable at high levels of in prostatectomised patients showing widespread metastatic prostate cancer. Cytotoxic compounds that could be activated by the proteolytic activity of PSA secreting prostate metastases. Conjugates of cytotoxic compounds and this oligopeptide are useful in treatment of prostate cancer. The oligopeptide can also be used in a quantitative assay for enzymatically
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               /note= "this Ser is optionally attached via a peptide bond to the 3'-amino group on the sugar ring of dozoubicin, alternatively it is optionally amidated when the peptide is N-terminally
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   M.J.AR.1998 (first entry)
Oligopeptide 15 cleaved by free prostate specific antigen.
Oligopeptide, proteolytic cleavage, prostate specific antigen; PSA,
Cleavage site; Semenogelin I; chymotrypsin-like; serum PSA,
adenocarcinoma, prostate metastases, prostate cancer; treatment,
detection; cytotoxic conjugate; activation; quantitative assay.
cleavage site; Semenogelin I; chymotrypsin-like; serum PSA; adenocarcinoma; prostate metastases; prostate cancer; treatment; detection; cytotoxic conjugate; activation; quantitative assay.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Oligopeptide(s) recognised and cleaved by free prostate specific antigen - useful in assays for active antigen, and in

                                                         The properties of the prostate specific antigen - useful in assays for active antigen, and in assays for active antigen, and in assays for active antigen, and in a say for active antigen, and in a says for active antigen, and in a say for active antigen, and in a conjugates for prostatic cancer treatment antigen - useful in assays for prostatic cancer treatment conjugates for proteolytically cleaved by free prostate specific antigen (PSA). It was designed based on the sequences surrounding the PSA cleavage sites of Semenogelin I, a major sperm entrapping gel protein. PSA, which has chymotrypsin-like specificity is responsible for dissolution of the gel structure formed at ejaculation by proteolysis of the major gel proteins (Semenogelin I and II, and fibronectin). Liquefaction of the ejaculate conference formed at ejaculation by proteolysis of the major genum PSA. Serum Conference of PSA are useful for monitoring treatment of adenocarcinoma (The prostate. Prostate metastases are also known to secrete immunologically reactive PSA since serum PSA is detectable at high levels of prostate conjugates of cytotoxic compounds that could be activated by the proteolytic cancer. Cytotoxic compounds that could be activated by the proteolytic concer. Cytotoxic compounds that could be activated by the proteolytic and this oligopeptide are useful in treatment of prostate cancer. The oligopeptide can also be used in a quantitative assay for enzymatically could per second adjected with an active proved. Cytotoxic compounds and a C-terminal amide group) was digested with anzymatically active PSA. After four hours 30 per cent of the peptide salt was cleaved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

Prostate specific antigen, semenogelin derived, cleavage substrate.
Human, semenogelin I: sperm entrapping gel; ejaculation; protease;
gel structure; dissolution; prostate specific antigen; proteolysis;
enmotrypain like specificity; peptide substrate; cleavage site;
assay; determination; proteolytic activity; identification;
inhibitor; cytotoxic agent; conjugated; treatment; prostate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New peptide substrates cleaved by prostate-specific antigen - also cytotoxic conjugates for treating prostate cancer, and assay for determination of PSA activity.

Claim 3: Page 58: 142pp: English.

Human semenogelin I (ASI) is one of the major proteins, including hSII and fibronectin, in the sperm entrapping gel formed at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ò

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New peptide substrates cleaved by prostate-specific antigen - also cytotoxic conjugates for treating prostate cancer, and assay for determination of PSA activity

Claim 3: Page 108: 142pp: English.

Human semenogelin I (hSI) is one of the major proteins, including than semenogelin I (hSI) is one of the major proteins, including claculation. This gel structure undergoes dissolution via the ejaculation. This gel structure undergoes dissolution via the action of prostate specific antigen (PSA), a protease with action of prostate specific antigen (PSA), a protease with cromotrypsin like specificity, which proteolyses the above major proteins. New substrates, including the present peptide, cleaved by PSA, i.e. peptides contg. a hSI PSA cleavage site, can be used in assays to determine the proteolytic activity of free PSA in a sample, and to identify odes. Which inhibit the proteolytic activity of pSA, they may also be conjugated, via a covalent bond or peptide linker, to a cytotoxic agent and used to treat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Prostate specific antigen, semenogelin derived, cleavage substrate. Prostate specific antigen, semenogelin derived, cleavage substrate. Human; semenogelin i; sperm entrapping gel; ejaculation; protease; gel structure; dissolution; prostate specific antigen; proteolysis; chymotrypsin like specificity; peptide substrate; cleavage site; assay; determination; proteolytic activity; identification; inhibitor; cytotoxic agent; conjugated; treatment; prostate cancer.
ejaculation. This gel structure undergoes dissolution via the action of prostate specific antigen (PSA), a protease with chymotrypsin like specificity, which proteolyses the above major proteins. New substrates, including the present peptide, cleaved by PSA, i.e. peptides contg. a hSI PSA cleavage site, can be used in assays to determine the proteolytic activity of free PSA in a sample, and to identify cpds. which inhibit the proteolytic activity of PSA, they may also be conjugated, via a covalent bond or peptide linker, to a cytotoxic agent and used to treat prostate cancer. In a PSA hydrolysis assay, the percentage of the present peptide cleaved by YORK PSA after 4 hrs. was 30 % acylated and amidated.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        .;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                           Prostate specific antigen, semenogelin derived, cleavage substrate. Human; semenogelin I; sperm entrapping gel; ejaculation; protease; gel structure; dissolution; prostate specific antigen; proteolysis; chymotrypsin like specificity; peptide substrate; cleavage site; assay; determination; proteolytic activity; identification; inhibitor; cytotoxic agent; conjugated; treatment; prostate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human: semenogelin I; sperm entrapping gel; ejaculation; protease; gel structure; dissolution; prostate specific antigen; proteolysis; chymotrypsin like specificity; peptide substrate; cleavage site; assay; determination; proteolytic activity; identification; inhibitor; cytotoxic agent; conjugated; treatment; prostate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   02-SEP-1996 (first entry)
Prostate specific antigen, semenogelin derived, cleavage substrate.
                                                                                                                                                                                                                                                                                           New peptide substrates cleaved by prostate-specific antigen - also cytotoxic conjugates for treating prostate cancer, and assay for determination of PgA activity.

Claim 3; Page 58; 142pp; English.

Human semenogelin I (AIS) is one of the major proteins, including hSI and fibronectin, in the sperm entrapping gel formed at ejaculation. This gel structure undergoes dissolution via the
                                                                                                                                                                                                                                                                                                                                                                                     action of prostate specific antigen (PSA), a protease with chymotrypsin like specificity, which proteolyses the above major proteins. New substrates, including the present peptide, cleaved by PSA, i.e. peptides contg. a hSI PSA cleavage site, can be used in assays to determine the proteolytic activity of free PSA in a activity of free PSA in a activity of PSA, they may also be conjugated, via a covalent bond or peptide linker, to a cytotoxic agent and used to treat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ..
                                                                                                                                                              /note= "prostate specific antigen proteolytic cleavage site"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           prostate cancer. In a PSA hydrolysis assay, the percentage of the present peptide cleaved by YORK PSA after 4 hrs. was 55 %
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    /note= "prostate specific antigen proteolytic

The present sequence is a novel oligopeptide designed based on the sequences surrounding the prostate specific antigen (PSA) cleavage sites of Semenogelin I, a manjor sperm entrapping gel protein. PSA, which has chymnotrypsin-like specificity is responsible for dissolution of the gel structure formed at ejaculation by proteolysis of the major gel proteins (Semenogelin I and II, and fibronectin). Liquefaction of the ejaculate releases progressively motile spermatozoa. PSA complexed to alpha 1-antichymotrypsin is the predominant form of serum PSA. Serum measurements of PSA are useful for monitoring treatment of adenocarcinoma of the prostate. Prostate metastases are also known to secrete immunologically reactive PSA since serum PSA is detectable at high levels in prostatectomised patients showing widespread metastatic prostate cancer. Cytotoxic compounds that could be activated by the proteolytic activity of PSA should also be prostate cell specific as well as specific confounds that could be activated by the proteolytic cativity of PSA should also be prostate cell specific as well as specific confounds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             oligopeptide can also be used in a quantitative assay for enzymatically active PSA.
New peptide substrates cleaved by prostate-specific antigen - also cytotoxic conjugates for treating prostate cancer, and assay for determination of PSA activity.

T determination of PSA activity.

Claim 4: Page III; 142pp: English.

Human semenogelin I (hSI) is one of the major proteins, including hSII and fibronectin, in the sperm entrapping gel formed at ection of prostate specific antigen (PSA), a protease with action of prostate specific antigen (PSA), a protease with chymotrypsin like specificity, which proteolyses the above major cymotrypsin like specificity, which proteolytic activity of free PSA in a says to determine the proteolytic activity of free PSA in a continity, and the proteolytic sample, and to identify cyds, which inhibit the proteolytic activity of sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Oligopeptide 132 based on Semenogelin I cleavage site.
Oligopeptide, proteolytic cleavage; prostate specific antigen; PSA; cleavage site; Semenogelin I; chymotrypsin-like; serum PSA; adenocarcinoma; prostate metastases; prostate cancer; treatment; detection; cytotoxic conjugate; activation; quantitative assay.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         activity of PSA, they may also be conjugated, via a covalent bond or peptide linker, to a cytotoxic agent and used to treat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          and this oligopeptide are useful in treatment of prostate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Oligopeptide(s) recognised and cleaved by free prostate specific antigen - useful in assays for active antigen, and in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                .;

Oligopeptide(s) recognised and cleaved by free prostate specific reduction useful in assays for active antigen, and in antigen - useful in assays for active antigen, and in proligopeptide-fug conjugates for prostatic cancer treatment bisclosure: Page 102: 192pp; English.

Crossing proteolytically cleaved by free prostate specific antigen (PSA). It was considered based on the sequences surrounding the PSA cleavage sites of semenogalin I, a major sperm entrapping gel protein. PSA, which has computing specificity is responsible for dissolution of the gel structure formed at ejaculation by proteolysis of the major gel proteins of the major specificity is responsible for dissolution of the gel structure formed at ejaculation by proteolysis of the major gel proteins of semenogalin I and II, and fibronectin). Liquefaction of the ejaculate crossively motile spermatozoa. PSA complexed to alpha 1-antichymotrypsin is the predominant form of serum PSA. Serum measurements of PSA are useful for monitoring treatment of adenocarcinoma of the prostate. Prostate metastases are also known to secrete communication prostate compounds that could be activated by the proteolytic cancer. Cytotoxic compounds that could be activated by the proteolytic cancer. Cytotoxic compounds that could be activated by the proteolytic compounds also be prostate cell specific as well as specific control of prostate can also be useful in treatment of prostate cancer. The coligopeptide are useful in treatment of prostate cancer. The coligopeptide was digested with enzymatically active PSA. After 4 hours 39 conserved to a ba.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ó

The present sequence is a novel oligopeptide that is recognised and proteolytically cleaved by free prostate specific antigen (PSA). It was designed based on the sequences surrounding the PSA cleavage sites of Semenogelin I, a major sperm entrapping gel protein. PSA, which has common specificity is responsible for dissolution of the gel structure formed at ejaculation by proteolysis of the major gel proteins (Semenogelin II, and fibronectin). Liquefaction of the ejaculate of Semenogelin I and II, and fibronectin). Liquefaction of the ejaculate of servences progressively motile spermatozoa. PSA complexed to alpha 1-antichymotrypsin is the predominant form of serum PSA. Serum of the prostate. Prostate metastasss are also known to secrete immunologically reactive PSA since serum PSA is detectable at high levels in prostatectonised patients showing widespread metastatic prostate cancer. Cytotoxic compounds that could be activated by the proteolytic activity of PSA should also be prostate cell specific as well as specific of PSA secreting prostate metastases. Conjugates of cytotoxic compounds and this oligopeptide are useful in treatment of prostate cancer. The oligopeptide can also be used in a quantitative assay for enzymatically
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   /note= "this Thr is optionally attached via a peptide bond to the 3'-amino group on the sugar ring of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              27-MAR-1998 (first entry) Oligopeptide 9 cleaved by free prostate specific antigen. Oligopeptide, proteolytic cleavage; prostate specific antigen; PSA; cleavage site; Semenogelin I; chymotrypsin-like; serum PSA; adenocarcinoma; prostate metastases; prostate cancer; treatment; detection; cytotoxic conjugate; activation; quantitative assay.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               oligoperide(s) recognised and cleaved by free prostate specific antigen. useful in assays for active antigen, and in oligopeptide-drug conjugates for prostatic cancer treatment claim 4 and 17; Page 161: 192pp; English.

The present sequence is a novel oligopeptide that is recognised and casined based by free prostate specific antigen (PSA). It was casined based on the sequences surrounding the PSA cleavage sites of Semenogelin I, a major sperm entrapping gel protein. PSA, which has chymotrypsin-like specificity is responsible for dissolution of the gel structure formed at ejaculation by proteolysis of the major gel proteins of structure formed at ejaculation by proteolysis of the major gel proteins (Semenogelin I and II, and fibronectin). Liquedaction of the ejaculate releases progressively motile spermatozoa. PSA complexed to alpha 1-antichymotrypsin is the predominant form of serum PSA. Serum measurements of PSA are useful for monitoring treatment of adenocarcinoma of the prostate. Prostate metastases are also known to secrete immunologically reactive PSA since serum PSA is detectable at high levels in prostatectomised patients showing widespread metastatic prostate cancer. Cytotoxic compounds that conjugates of cytotoxic compounds confinity of PSA should also be prostate cell specific as well as specific a confit is oligopeptide can also be useful in treatment of prostate cancer. The oligopeptide can also be used in a quantitative assay for enzymatically cartive PSA. In a study of cleavage affinity, the TFA salt of this peptide was algested with enzymatically active PSA. After four hours 62 per cent of the peptide was cleaved.

This abundant protein from seminal vesicle secretions maintains a gel-like environment for the sperm cells. At ejaculation, kallikrein-like enzymes in prostatic secretions cleave this protein, resulting in liquefaction of the seminal gel and allowing increased sperm motility.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Eur. scale 1.126 Mean 21.081; Variance 18.718; Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                             -:- FUNCTION: COMPONENT OF THE UBIQUINOL-CYTOCHROME C REDUCTASE
COMPLEX (COMPLEX III OR CYTOCHROME B-C1 COMPLEX), WHICH IS A
RESPIRATORY CHAIN THAT GENERATES AN ELECTROCHEMICAL POTENTIAL
COUPLED TO ATP SYNTHESIS.
-!- CATALYTIC ACTIVITY: OH(2) + 2 FERRICYTOCHROME C = Q +
2 FERROCYTOCHROME C.
-!- COACTOR: TWO HEME GROUPS (B562 AND B566) WHICH ARE NOT COVALENTLY
BOUND TO THE PROTEIN.
-!- SUBUNIT: THE MAIN SUBUNITS OF COMPLEX B-C1 ARE: CYTOCHROME B,
CYTOCHROME C1 AND THE RIESRE PROTEIN.
